As organisations grow and age they progress through predictable lifecycles stages. Each stage brings increased organisational complexity as well as new and unique challenges.

Strategy, structure, levels of delegation, goals, rewards systems and methods of operating usually differ quite markedly in each stage of the organisation lifecycle.

How well or how poorly leadership addresses the challenges and demands of each stage will determine the success or failure of many of today's organisations.

Making successful lifecycle transitions is not easy or obvious. The methods that produce success in one stage can create failure in the next. Leaders who fail to understand what is needed (and not needed) can inhibit the successful development of their organisation.
